Manually Tested Stories

User Story 11

User Story #	Description
11	As a dieter and athlete, I would be able to switch between imperial and metric systems to measure weights in the gym and portions in the kitchen.

Test Case 1:

Description: This test case is to ensure that users can switch between imperial and metric systems whenever they desire.

Input: The user has imperial selected in settings, and selects the metric measurement system.

Output: The user has now selected metric, and all measurements are changed accordingly

Acceptable Output?: Yes

Test Case 2:

Description: Test to ensure that when a workout is logged in imperial and converted to metric, the conversion is accurate.

Input: The user logs a workout using 50 pounds, then converts it to metric.

Output: When checking the logged workouts, that workout is listed as using a weight of 23 kilograms

Acceptable Output?: Yes

Test Case 3:

Description: Test to ensure that when a workout is logged in metric and converted to imperial, the conversion is accurate.

Input: The user logs a workout using 23 kilograms, then converts in settings to imperial.

Output: When checking the logged workouts, that workout is listed at using a weight of 50 pounds

Acceptable Output?: Yes

User Story 14

User Story #	Description
14	As a user, I would like to be able to select a location, so I can see gyms and people near me.

Test Case 1:

Description: Tests to ensure that pressing the nearby gym button displays opens a location popup.

Input: Navigate to the last tab and press the 'Search Nearby Gyms' button.

Output: A popup window appears labeled 'Nearby Gyms', and prompts the user for location access. If the user denies, the window displays 'No location access.'

Acceptable Output? Yes

Test Case 2:

Description: Tests to ensure that the popup displays location if possible.

Input: After opening the gym popup, allow location access.

Output: An embedded map with pins of nearby gyms, friends, and your current location appears visible on the popup.

Acceptable Output? Yes

Test Case 3:

Description: Tests to ensure that the user can close the gym search popup and return to the previous screen.

Input: Open the gym search feature, then press the 'Close Gym Search' button.

Output: The gym search feature closes and the user is returned to the previous screen.

Acceptable Output? Yes

User Story 15

User Story #	Description
15	As a user, I would like to be able to enable certain accessibility features (dark mode, large text).

Test Case 1:

Description: Tests to ensure that enabled accessibility settings persist after restarting the app.

Input: Enable dark mode and/or adjust text size in settings, close the application, then reopen the app.

Output: The previously selected accessibility settings remain enabled when the app is reopened.

Acceptable Output?: Yes

User Story 18

User Story #	Description
18	As a dieter, I would be able to view the nutritional facts of different meals from national restaurants.

Test Case 1:

Description: Tests the text field to filter by restaurant

Input: Type in 'Shake Shack' then press 'Search'

Output: Only meals from Shake Shack are displayed

Acceptable Output?: Yes, press 'Clear'

Test Case 2:

Description: Tests the text field to filter by protein gram margin

Input: Type in '30' then press 'Search'

Output: Only meals that have at least 30g of protein are displayed

Acceptable Output?: Yes, press 'Clear'

Test Case 3:

Description: Tests the button to filter by chicken protein source.

Input: Press 'chicken'

Output: Only meals containing chicken are displayed

Acceptable Output?: Yes, press 'Clear' or unpress 'chicken'

Test Case 4:

Description: Tests the button to filter by beef protein source.

Input: Press 'beef'

Output: Only meals containing beef are displayed

Acceptable Output?: Yes, press 'Clear' or unpress 'beef'

User Story 19

User Story #	Description
19	As a user, I will be able to bypass manually inputting username and password during login with a Remember Me feature

Test Case 1:

Description: Tests the button to toggle the Remember Me login authorization feature

Input: On the Login screen, type in the email & username of an existing account, press 'Remember Me' button, press 'Login' button, redirect to Home tab, close the application, reopen the application.

Output: Bypasses the Login screen and instantly redirected to Home tab

Acceptable Output?: Yes

User Story 20

User Story #	Description
20	As a user, I would like to be able to read and agree to the Terms and Conditions of the service.

Test Case 1:

Description: Tests to ensure that the terms and conditions screen is visible before onboarding.

Input: Navigate to the account creation window, create an account, and click the "Start Onboarding" button.

Output: The page shows a terms and conditions PDF, a checkbox to accept, and a continue button.

Acceptable Output? Yes

Test Case 2:

Description: Tests to ensure that not accepting the terms and condition prevents the user from continuing to data collection

Input: After reaching the terms and conditions page, ensure the checkbox is unchecked, and click continue.

Output: An alert will appear signaling the user to accept the terms and conditions, and the user will not be redirected to any new page.

Acceptable Output? Yes

Test Case 3:

Description: Tests to ensure that the user can continue once the terms and conditions have been accepted.

Input: After reaching the terms and conditions page, ensure the checkbox is checked, and click continue.

Output: The user is redirected to the start of the onboarding questions.

Acceptable Output? Yes

User Story 21

User Story #	Description
21	As a user, I would like to be able to set up app notifications for workouts, meals, etc.

Test Case 1:

Description: Tests the toggle in settings to enable app notifications.

Input: Navigate to settings, ensure notifications are currently disabled, then press the notifications toggle to enable them.

Output: Notifications are now enabled in settings

Acceptable Output? Yes

Test Case 2:

Description: Test to ensure that a workout notification is sent at the scheduled time when notifications are enabled.

Input: Enable notifications in settings, schedule a workout reminder for a time a few minutes in the future, then wait until that time arrives.

Output: A workout notification arrives at the scheduled time.

Acceptable Output? Yes

Test Case 3:

Description: Test to ensure that a meal notification is sent at the scheduled time when notifications are enabled.

Input: Enable notifications in settings, schedule a meal reminder for a time a few minutes in the future, then wait until that time arrives.

Output: A meal notification arrives at the scheduled time.

Acceptable Output? Yes

Test Case 4:

Description: Test to ensure that notifications are not sent when notifications are disabled.

Input: Disable notifications in settings, schedule a workout or meal reminder for a time a few minutes in the future, then wait until that time arrives.

Output: No notification is sent when the scheduled time arrives.

Acceptable Output? Yes

User Story 22

User Story #	Description
22	As a gym user, I will be able to generate an all-inclusive, tailored, generic Quick Workout, accounting for every possible profile characteristic.

Test Case 1:

Description: Test to ensure that a quick workout is generated for the user by the AI

Input: The user selects the generic generate workout button, then presses generate workout

Output: A workout is generated for the user based on their profile data, and displayed to the user.

Acceptable Output?: Yes

Test Case 2:

Description: Test to ensure that the workout can be logged and started by the user

Input: The user generates a workout, and then presses the log workout button

Output: The workout is not found in the log, it does not appear anywhere after the log workout button is pressed

Acceptable Output?: No

User Story 23

User Story #	Description
23	As a gym user, I will be able to generate a tailored workout purely based on a specific muscle group.

Test Case 1:

Description: Test to ensure that a quick workout is generated for the user by the AI for the selected muscle

Input: Back is selected, and the generate workout button is selected

Output: A back workout is generated for the user with multiple exercises, weights, and sets

Acceptable Output?: Yes

Test Case 2:

Description: Test to ensure that a quick workout is not generated for the user by the AI if there is no selected muscle

Input: No muscle is selected, and the generate workout button is selected

Output: A full-body workout is generated for the user with multiple exercises, weights, and sets

Acceptable Output?: No

User Story 24

User Story #	Description
24	As a user, I want to generate a quick meal recommendation so that I can easily decide what to eat based on my preferences and goals.

Test Case 1:

Description: Test to ensure that a personalized quick meal is generated based on user profile data

Input: User has profile data (dietary preferences/goals) and presses the generate meal button

Output: A meal recommendation is generated with relevant food items aligned with the user's preferences and goals

Acceptable Output?: Yes

Test Case 2:

Description: Test to ensure that a meal is still generated even if limited or no user preferences are available

Input: User has minimal or no profile data and presses the generate meal button

Output: A general meal recommendation is generated (not personalized)

Acceptable Output?: Yes

User Story 25

User Story #	Description
25	As a dieter, I will be able to chart intake and set goals for macro and water.

Test Case 1:

Description: User will be able to set initial goals and add amounts during the day

Input: Logged into an account and navigated to the diet screen, the app will come with default values for macros programmed in and the daily amounts set to 0

Output: Users are able to edit their goals and add to their goals during the day.

Acceptable Output?: Yes

Test Case 2:

Description: User will see the tracker automatically populate with meals

Input: User has made a meal with macros attached to it

Output: The tracker will increment and show the meal's macros

Acceptable Output?: Yes

User Story 26

User Story #	Description
26	As a new user, I will have my day-one caloric goals displayed based on onboarding responses.

Test Case 1:

Description: Tests if the calorie goals widget display gets populated after onboarding

Input: On the Login screen, press 'Create Account', type in a email username password, press 'Create Account', press 'Start Onboarding', toggle 'I accept the TnC', press 'Continue', answer the questionnaire fairly, navigate to Diet tab

Output: Notice the representative calorie goal displayed in the widget, with 0 consumed and identical remaining calories.

Acceptable Output?: Yes

User Story 28

User Story #	Description
28	As a user, I would be able to assign macros and ingredients to my meals when I add them.

Test Case 1:

Description: Test too see that users can input new meals

Input: Given the diet screen, users can go through and add macros and ingredients

Output: The meal card with the assigned macros and ingredients

Acceptable Output?: Yes

Test Case 2:

Description: User is prompted to fill in empty lines in the meal card

Input: When inputting a meal, the user is prompted to fill in missing macros or ingredients

Output: Pop-up warning reminding the user to fill in missing fields

Acceptable Output?: No

Test Case 3:

Description: Given a meal in the browser, a user can edit that meal

Input: After a meal has been created, the user will be able to select the edit meal button to make changes

Output: The user is returned to the tagging section to make any changes

Acceptable Output?: Yes

User Story 29

User Story #	Description
29	As a user, I would like to be able to have weekly and monthly diet and workout reports generated.

Test Case 1:

Description: This test case is to ensure that the weekly generated reports generate properly with the UI, and that the desired statistics are displayed with placeholder values

Input: Logged into an account with no data, the temporary generate weekly report button is set

Output: The weekly report is generated, showing the calculated statistics with placeholder values as desired

Acceptable Output?: Yes

Test Case 2:

Description: This test case is to ensure that the monthly generated reports generate properly with the UI, and that the desired statistics are displayed with placeholder values

Input: Logged into an account with no data, the temporary generate monthly report button is set

Output: The monthly report is generated, showing the calculated statistics with placeholder values as desired

Acceptable Output?: Yes

Test Case 3:

Description: Ensuring that for a specific user, the monthly and weekly reports are accurate for their logged data

Input: Logged into an account with a month's worth of data, the temporary generate monthly/weekly report button is set

Output: The weekly/monthly report is generated, showing the calculated statistics with placeholder values

Acceptable Output?: No

User Story 31

User Story #	Description
31	As a gym user, I will have access to a help feature that suggests alternative options if a machine or exercise isn't available or is undesirable.

Test Case 1:

Description: Tests to ensure that the alternatives button/icon appears when a user is viewing a generated exercise.

Input: Navigate to the workout tab and press generate workout, and then generate quick general workout.

Output: The quick workout is generated, and every exercise has an alternatives button next to it.

Acceptable Output?: Yes

Test Case 2:

Description: Tests to ensure that pressing the alternatives button displays valid machine alternatives.

Input: While viewing the list of generated exercises, press the alternatives button next to any one of the exercises.

Output: A scrollable list of relevant alternative exercises are shown, with detailed instructions.

Acceptable Output? Yes

Test Case 3:

Description: Tests to ensure that the user can close the alternatives popup and return to the previous screen.

Input: Open the alternatives feature for any exercise, then press the 'Close Alternatives' button.

Output: The alternatives feature closes and the user is returned to the screen with the list of generated exercises.

Acceptable Output? Yes

User Story 32

User Story #	Description
32	As a beginner in my fitness journey, I will have access to a help feature that provides assistance on exercises.

Test Case 1:

Description: Tests to ensure that the help button/icon appears when a user is viewing an exercise.

Input: Navigate to the last tab, select 'Exercises' button, and view the list of exercises.

Output: A help button/icon is visible next to every exercise.

Acceptable Output? Yes

Test Case 2:

Description: Tests to ensure that pressing the help button displays exercise assistance information.

Input: While viewing the list of exercises, press the help/button next to any one of the exercises.

Output: Step-by-step instructions are displayed for the selected exercise.

Acceptable Output? Yes

Test Case 3:

Description: Tests to ensure that the user can close the help feature and return to the previous screen.

Input: Open the help feature for any exercise, then press the 'Back to Exercises' button.

Output: The help feature closes and the user is returned to the screen with the list of exercises.

Acceptable Output? Yes

User Story 33

User Story #	Description
33	As a gym user, I would like to view a graph of weight progression for a specific exercise

Test Case 1:

Description: Tests to ensure that the help button/icon appears when a user is viewing an exercise.

Input: Navigate to the workout tab and expand a previously logged workout.

Output: A progression button/icon is visible next to every exercise.

Acceptable Output? Yes

Test Case 2:

Description: Tests to ensure that pressing the progression button displays exercise previously logged data.

Input: While viewing the list of exercises, press the progression button next to any one of the exercises.

Output: A graph is shown with the user's previously logged weights in red.

Acceptable Output? Yes

Test Case 3:

Description: Tests to ensure that the user can see future data points after pressing the progression button.

Input: While viewing the list of exercises, press the progression button next to any one of the exercises.

Output: A graph is shown with the user's potential future data plotted in green, hopefully following the trend of the red line.

Acceptable Output? Yes
