Manually Tested Stories

User Story 14

User Story #	Description
14	As a user, I would like to be able to select a location, so I can see gyms and people near me.

Test Case 1:

Description: Determine if users are prompted to provide location.

Input: Navigate to the test index page and click the open gyms button.

Output: User should be prompted to provide location access.

Acceptable Output?: Yes

Test Case 2:

Description: Determine if users can deny location access.

Input: Click decline location access when prompted.

Output: Gym maps modal should display “No location access”.

Acceptable Output?: Yes

Test Case 3:

Description: Determine if users can view nearby gyms with location access.

Input: Click allow location access when prompted.

Output: Gym maps modal should display a map embedding with pins of nearby gyms.

Acceptable Output?: Yes

User Story 22

User Story #	Description
22	As a gym user, I will be able to generate an all-inclusive, tailored, generic Quick Workout, accounting for every possible profile characteristic.

Test Case 1:

Description: Ensure that edited reps by the user are properly displayed in the logged workout

Input: Press generate workout, and then generate quick workout. For the first exercise generated, pull up, edit the reps from 8 to 10 for each set.

Output: The generated workout displays the edited reps for pull-ups, and, when logged, the logged workout has 10 reps instead of 8.

Acceptable Output?: Yes

Test Case 2:

Description: Ensure that edited weights by the user are properly displayed in the logged workout

Input: For the same pull up workout, edit weight from 0 lbs (body weight) to 10 lbs for each set.

Output: The generated workout displays the edited weight for pull-ups, and, when logged, the logged workout has 10 lbs for weight instead of 0.

Acceptable Output?: Yes

Test Case 3:

Description: Ensure that generated workouts are logged to the database and shown to the user properly

Input: Press Generate Workout then press generate quick workout. When going to the log generate workout page, press the log generated workout button.

Output: The name for the generated workout, "Full Body Quick Fit" is found in the workout log, and all workouts generated are properly displayed in the log.

Acceptable Output?: Yes

Test Case 4:

Description: Ensure that generated workouts are not logged to the database if the user selects cancel

Input: Press generate workout, then generate a quick workout, when the generated workout is displayed, click cancel.

Output: Return to the log workout page, where the generated workout is nowhere to be found, as it was not logged.

Acceptable Output?: Yes

User Story 23

User Story #	Description
23	As a gym user, I will be able to generate a tailored workout purely based on a specific muscle group.

Test Case 1:

Description: Determine if users can generate a workout if they do not select a muscle group

Input: Press the generate workout button, then generate for the muscle. When there, select none of the muscle groups and attempt to generate a workout.

Output: The user is prompted with the error, "Please select the muscle group".

Acceptable Output?: Yes

Test Case 2:

Description: Verify that users can select multiple muscle groups and have a workout generated for the intended muscle groups

Input: On the generate workout for muscle page, the user selects an ab, back, and bicep workout.

Output: The generated workout contains pull-ups and lat pull-downs for the back, russian twists for abs, and bicep curls for biceps.

Acceptable Output?: Yes

Test Case 3:

Description: Confirm that if a user selects a full-body workout, they are not able to pick other muscle groups with the full-body workout

Input: Select the full-body muscle option in the generate workout for muscle page, then attempt to select glute

Output: Full-body is unselected, and glute is selected, contending that full-body can not be selected with glute.

Acceptable Output?: Yes

User Story 29

User Story #	Description
29	As a user, I would like to be able to have weekly and monthly diet and workout reports generated.

Test Case 1:

Description: Test if placeholder data is displayed for a user with no workout log

Input: User that has no data clicks the generate weekly/monthly report buttons

Output: The user statistics have no meaningful values, just the placeholders, a.k.a 0, None

Acceptable Output?: Yes

Test Case 2:

Description: Test that an account with proper data is reflected in the monthly/weekly report

Input: Two workouts are generated with generate quick workout, and the user logs both of them then clicks generate monthly/weekly report

Output: The newly logged workouts are reflected in the reports, having 2 workouts logged and all other statistics filled

Acceptable Output?: Yes

Test Case 3:

Description: Test to ensure that workouts that should be in the monthly report and not the weekly report work

Input: User goes into log workout and logs a workout for March 30th, then presses the weekly and monthly report

Output: The monthly report reflects the newly input workout, but the weekly report does not as it is out of the scope

Acceptable Output?: Yes

User Story 34

User Story #	Description
34	As a gym user, I would like to be able to upload my workouts to a community space.

Test Case 1:

Description: Test to make sure a workout is not uploaded if post is not selected

Input: Generate a quick workout, log it, and then when the upload pop up shows up, click not now

Output: The workout is logged properly, but not uploaded to the feed

Acceptable Output?: Yes

Test Case 2:

Description: Test to make sure a quick workout is uploaded properly

Input: Click the generate quick workout button, then when logging, press upload

Output: The posted workout by the user can be seen by their friends

Acceptable Output?: Yes

Test Case 3:

Description: Test to make sure an added workout is uploaded properly

Input: Click the log workout button, add a workout and log it, then click the upload button

Output: The logged workout is successfully uploaded and seen by friends

Acceptable Output?: Yes

Test Case 4:

Description: Test to make sure workouts can be posted from the workout screen

Input: Generate a workout, log it but press not now to uploading, then click post on the workout that was logged

Output: The logged workout is successfully uploaded and seen by friends

Acceptable Output?: Yes

User Story 35

User Story #	Description
35	As a social user, I would like to be able to share or show off my progress to my friends.

Test Case 1:

Description: Determine if users can view a profile with a progress button.

Input: Go to the social tab and search for a username.

Output: A profile should appear with a button showing a flexing arm and graph, representing the progression.

Acceptable Output?: Yes

Test Case 2:

Description: Determine if users can view a list of exercises to see the progression.

Input: Press the flexing arm with the graph button.

Output: A list of exercises should appear, with a button labeled "Progression" next to each.

Acceptable Output?: Yes

Test Case 3:

Description: Determine if users can view a graph of weight progression for other users.

Input: Press any button labeled "Progression" after viewing the exercise list from Test Case 2.

Output: A graph showing the user's current logged progression on that exercise, alongside projected progression, should be displayed.

Acceptable Output?: Yes

User Story 36

User Story #	Description
36	As a user, I will be able to see a feed of posts from my friends

Test Case 1:

Description: Determine if users can view posts from their accepted friends in the friends feed.

Input: On one account, send and accept a friend request between two users. On the friend's account, create a post. On the first account, go to the social tab and open the friends feed.

Output: The post created by the accepted friend should appear in the friends feed.

Acceptable Output?: Yes

Test Case 2:

Description: Determine if posts from non-friends or blocked users do not appear in the friends feed.

Input: On one account, view the friends feed when another user is not an accepted friend, or when one of the two users has blocked the other. Have that other user create a post, then re-open the friends feed.

Output: The post from the non-friend or blocked user should not appear in the friends feed.

Acceptable Output?: Yes

Test Case 3:

Description: Determine if newly created posts by friends appear after the friends feed is refreshed/re-opened.

Input: On two accounts that are accepted friends, create a new post on one account. On the other account, re-open the friends feed.

Output: The newly created post by the friend should appear in the friends feed.

Acceptable Output?: Yes

User Story 37

User Story #	Description
	As a user, I will be able to see a feed of posts from my gym

Test Case 1:

Description: Determine if users can view posts from other users in the same gym in the gym feed.

Input: Set two users to the same gym location. On one account, create a post. On the other account, go to the social tab and open the gym feed.

Output: The post created by the user from the same gym should appear in the gym feed.

Acceptable Output?: Yes

Test Case 2:

Description: Determine if posts from users in different gyms do not appear in the gym feed.

Input: Set two users to different gym locations. On one account, create a post. On the other account, go to the social tab and open the gym feed.

Output: The post created by the user from the different gym should not appear in the gym feed.

Acceptable Output?: Yes

Test Case 3:

Description: Determine if newly created posts from users in the same gym appear after the gym feed is refreshed/re-opened.

Input: Set two users to the same gym location. On one account, create a new post. On the other account, re-open the gym feed.

Output: The newly created post from the user in the same gym should appear in the gym feed.

Acceptable Output?: Yes

User Story 38

User Story #	Description
38	As a social user, I would like to be able to view my friends' streaks.

Test Case 1:

Description: Verify that a friend's streak is shown correctly in the Social profile search/results view

Input: User A has a workout streak saved in the database. User B, who is an accepted friend of User A, searches for User A in the Social tab.

Output: User B is able to see User A's streak value in the search result/profile preview.

Acceptable Output?: Yes

Test Case 2:

Description: Verify that the streak shown in a friend profile matches the actual streak stored/calculated for that user

Input: User A has logged workouts across multiple weeks to create a streak. User B opens User A's profile/details modal from the Social tab.

Output: The streak displayed to User B matches the streak value calculated from User A's workout history.

Acceptable Output?: Yes

Test Case 3:

Description: Verify that the user is notified when a streak starts or is lost

Input: User A logs a workout after not having an active streak, then later misses a week after having an active streak.

Output: The app shows a notification when User A starts a new streak and another notification when User A loses the streak.

Acceptable Output?: Yes

User Story 39

User Story #	Description
39	As a social user, I would like to be able to message other users in the app.

Test Case 1:

Description: Determine if users can view their existing conversations on the messaging page.

Input: Log into an account that already has at least one existing conversation. Go to the social tab and open the messaging page.

Output: A list of the user's existing conversations should appear on the messaging page.

Acceptable Output?: Yes

Test Case 2:

Description: Determine if messages in a selected conversation are displayed in chronological order.

Input: Open the messaging page and select an existing conversation that contains multiple messages.

Output: The messages in the selected conversation should appear in chronological order from oldest to newest.

Acceptable Output?: Yes

Test Case 3:

Description: Determine if a received message appears in the conversation.

Input: On one account, open a conversation and send a message to another user. On the second account, open the same conversation.

Output: The new message should appear in the conversation for the receiving user.

Acceptable Output?: Yes

User Story 43

User Story #	Description
43	As a social user, I would like to be able to “like”, react, and comment on different shared workouts and meals.

Test Case 1:

Description: Determine if users can like posts.

Input: Go to the social tab, view posts by friends, and click the like button.

Output: The like button’s counter should increment, and the text should change to “Unlike”.

Acceptable Output?: Yes

Test Case 2:

Description: Determine if users can react to posts.

Input: Go to the social tab, view posts by friends, and click each emoji reaction button.

Output: When clicked, each button should raise slightly indicating the current reaction, and the corresponding counter should increment when clicked, and decrement when another button is clicked.

Acceptable Output?: Yes

Test Case 3:

Description: Determine if users can comment on posts.

Input: Go to the social tab, view posts by friends, click the comment button, enter text into the textbox at the top, and click post comment.

Output: A list of comments, or “Be the first to comment!” should appear, and when the user presses “post comment”, their comment should appear at the top of the list

with a timestamp and proper text formatting.

Acceptable Output?: Yes

User Story 44

User Story #	Description
44	As a user, I will be able to view a Notifications page to view friend requests and likes & comments on my posts

Test Case 1:

Description: Determine if users can view notification.

Input: Go to the social tab and click the notification bell.

Output: A list of notifications, or “No notifications!” should appear.

Acceptable Output?: Yes

Test Case 2:

Description: Determine if users can accept friend request notifications.

Input: On one account, send a friend request to a user. On the requested user’s account, view the notifications page. On the friend request notification, hit accept.

Output: The notification should remove itself from the list of notifications, and when the first account tries to send another request, it should say “Remove from friends list?” indicating the user has accepted the request.

Acceptable Output?: Yes

Test Case 3:

Description: Determine if users can dismiss notifications.

Input: Go to the social tab and like a post by a user. On the user with the post, click the dismiss button on the liked post notification.

Output: A proper notification should appear indicating the post was liked, and should be removed from the feed upon hitting the dismiss button.

Acceptable Output?: Yes

User Story 46

User Story #	Description
--------------	-------------

46	As a social user, I would like to be able to set collaborative goals with my friends, where we all work toward similar goals and hold each other accountable.
----	---

Test Case 1:

Description: Users are presented with a create button to create a group goal

Input: Users are presented with a create button inside a group goal container

Output: The button spawns a popup with a group goal input area

Acceptable Output?: Yes

Test Case 2:

Description: Friends of users can see the created goal and chart their progress; users can also uninvite themselves from the goal

Input: A created goal

Output: Users can see a goal in the social tab

Acceptable Output?: Yes, but the goal is global and not limited to friends

Test Case 3:

Description: Once a goal is completed, users will be alerted to the goal being finished.

Input: Fully logged goal

Output: A checkmark next to the goal

Acceptable Output?: Yes

User Story 47

User Story #	Description
47	As a user, I will be able to attach my gym location to my profile.

Test Case 1:

Description: Verify gym location is unknown for a newly created account

Input: Create account, submit onboarding quiz, navigate to Account in Settings

Output: 'Gym Location' displays 'Unknown Location'

Acceptable Output?: Yes

Test Case 2:

Description: Update gym location

Input: Press the 'Gym Location' dropdown, select a nearby gym from options, press 'Save Profile'

Output: 'Gym Location' displays whatever we selected

Acceptable Output?: Yes, press '<--' out of settings

Test Case 3:

Description: Verify updated gym location

Input: From Home, navigate to Account in Settings

Output: 'Gym Location' displays whatever we selected in Test Case 2

Acceptable Output?: Yes, press '<--' out of settings

User Story 48

User Story #	Description
48	As a social user, I would like to be able to decide whether my progress is public or available only to specific users.

Test Case 1:

Description: Verify that a public profile allows any valid non-blocked user to see progress

Input: User A sets Progress Visibility to Public. User B logs into another valid account and opens User A's profile in the Social tab.

Output: User B is able to view User A's progress information

Acceptable Output?: Yes

Test Case 2:

Description: Verify that a restricted profile only allows accepted friends to see progress

Input: User A sets Progress Visibility to Restricted. User B is an accepted friend and opens User A's profile. User C is not a friend and opens User A's profile.

Output: User B can view User A's progress information, while User C cannot and instead sees the restricted-access version

Acceptable Output?: Yes

Test Case 3:

Description: Verify that a blocked user cannot see progress even if the profile is public

Input: User A sets Progress Visibility to Public, then blocks User B. User B logs in and opens User A's profile.

Output: User B cannot view User A's progress information and instead sees a restricted or blocked-access view.

Acceptable Output?: Yes
